General Purpose I/O: GPIO (A,B,C,D and E)

- 80 General Purpose I/O pins
- arranged in 5 ports named with GPIOA, GPIOB, GPIOC, GPIOD and GPIOE
- can be configured by software individually as input, output, open-drain or quasi-bidirectional mode.
- After reset, the I/O type of all pins stay in quasi-bidirectional mode and port data register GPIOx_DOUT[15:0] resets to 0x0000_FFFF.

General Purpose I/O: GPIO (A,B,C,D and E)

Features

- **Four I/O modes:**
  - Quasi bi-direction
  - Push-Pull output
  - Open-Drain output
  - Input only with high impendence

- **TTL/Schmitt trigger input selectable**

- **I/O pin can be configured as interrupt source with edge/level setting**

- **High driver and high sink IO mode support**

- GPIO Interrupt and wakeup function

Each GPIO pin can be set as chip interrupt source by setting correlative GPIOx_IEN bit and GPIOx_IMD. There are four types of interrupt condition can be selected: low level trigger, high level trigger, falling edge trigger and rising edge trigger. For edge trigger condition, user can enable input signal de-bounce function to prevent unexpected interrupt happened which caused by noise. The de-bounce clock source and sampling cycle can be set through DEBOUNCE register.
The GPIO can also be the chip wakeup source when chip enter idle mode or power down mode.

[n]	IMD[n]	**Port [A/B/C/D/E] Edge or Level Detection Interrupt Control** IMD[n] is used to control the interrupt is by level trigger or by edge trigger. If the interrupt is by edge trigger, the trigger source can be controlled by de-bounce. If the interrupt is by level trigger, the input source is sampled by one HCLK clock and generates the interrupt. 1 = Level trigger interrupt 0 = Edge trigger interrupt If set pin as the level trigger interrupt, then only one level can be set on the registers GPIOx_IEN. If set both the level to trigger interrupt, the setting is ignored and no interrupt will occur The de-bounce function is valid for edge triggered interrupt. If the interrupt mode is level triggered, the de-bounce enable bit is ignored.
