# 1. Overview

The NUC1XX series are ARM® Cortex™-M0 core embedded microcontroller for industrial control and the applications which needed Rich communication functions. The Cortex™-M0 is the newest ARM embedded processor with 32-bit performance and at a cost equivalent traditional 8-bit microcontroller.

The NUC1XX series with Cortex™-M0 core runs up to 50MHz, up to 32K/64K/128K-byte embedded flash, and 4K/8K/16K-byte embedded SRAM, it also integrates Timers, Watchdog Timer, RTC, PDMA, UART, SPI/SSP, I2C, PWM Timer, GPIO, LIN, CAN, USB 2.0 FS Device, 12-bit ADC, Analog Comparator, Low Voltage Detector and Brown-out detector.

# 2. System Requirements

The PC running in Windows XP or Windows Vista.

KEIL RVMDK (V3.7 or later)

One available USB port

# 3. Software Setup.

Install Nu-Link\_Driver V1.01.

# 4. Hardware Setup

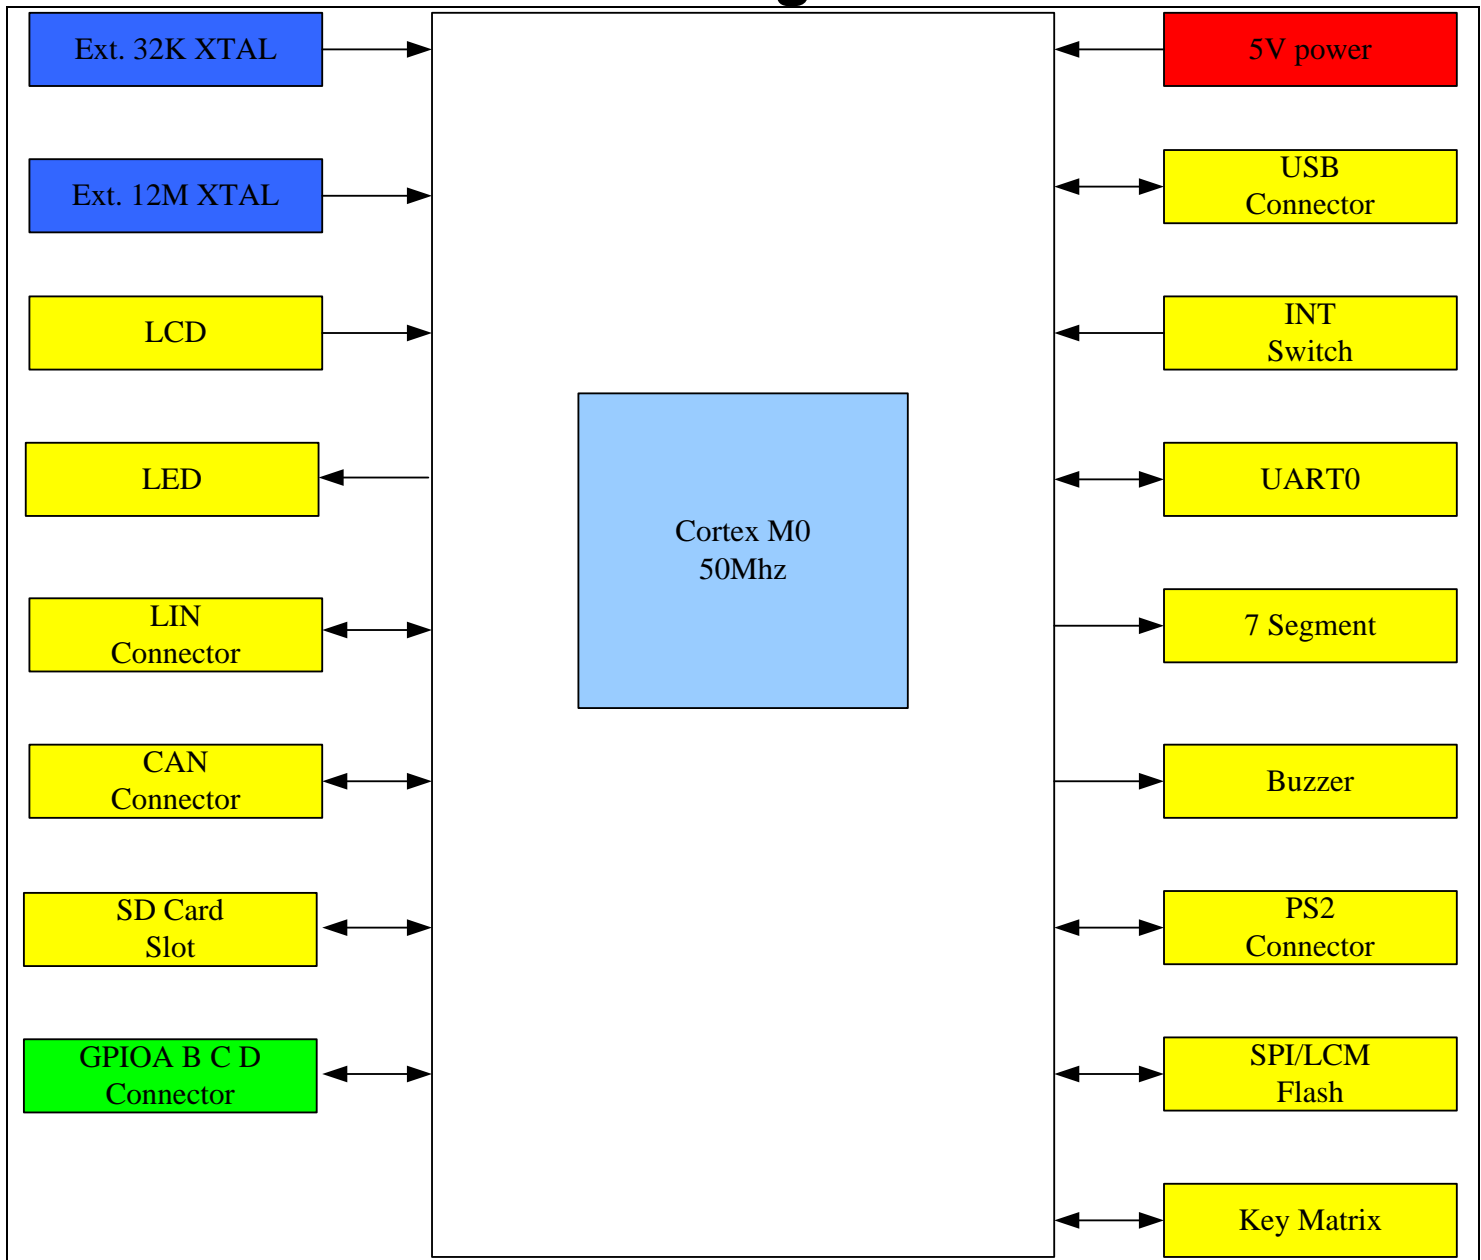

The Learn Board is connecting to a PC running the KEIL IDE via USB ICE as show in figure.

1, Connect the 5V power adapter to power jack on the learn board.

2, The PC's USB port to connect the ICE USB I/F.
